the present sequence is given in a specification relating to a novel human antibody that is capable of recognising the Epithelial Glycoprotein 2 (EGP-2) antibody. The antibody is useful for prevention and/or treatment of conditions associated with cancer. Such conditions include solid tunnours, blood born tumnours such as leukemia, tumnour metastasis, benign tumnours, for e.g. haemangiomas, acoustic neuromas, rheumatoid arthritis, psoriasis, ocular angiogenic diseases, diabetic retinopathy, myocardial angiogenesis, telangiectasia, wound granulation, angiogenesis, diabetic neovascularisation, vasculogenesis, ovulation, menstruation and conservation in the antibody is useful for in vivo imaging of cancer and conservation in memunological response in a mammal in vivo. The vector is selected from fowl pox virus (FPV), canary pox (ALVAC), cancer momopox virus, vaccinia virus such as modified virus ankara (WVA) and NVVAC or other non-replicating viral vector systems in order to provide a dual immunotherapeutic approach
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
Novel human antibody that recognizes the epithelial glycoprotein-2 antigen useful for diagnosis, prevention and/or treatment of cancer-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human; antibody; dual integrin; CDR; light chain variable region; LC CDR; medical device; immune related disease; rheumatoid arthritis; gastric ulcer; asthma; allergic rhinitis; Crohn's pathology; sickle cell anaemia; diabetes; cardiovascular disease; arteriosclerosis; atherosclerosis; restenosis; angina pectoris; myocardial infarction; infectious disease; pneumonia; leptosy; malaria; malignant disease; neutological disease; multiple sclerosis; Parkinson's disease;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            envelope
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to human immunopolypeptides, produced by a phage transfected cell library. The present sequence is one such immunopolypeptides have binding specificty for envelope glycoprotein B2 and nonstructural protein N83 of hepatitis C virus (HCV). E2 glycoprotein is believed to be responsible for target cell binding and contains neutralising epitopes, while N83 is thought to be involved in the replication of HCV. The immunoplypeptides are useful for diagnosing and treating a patient having or suspected to be having
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New human immunopolypeptide with binding specificity for certain envelope glycoproteins and nonstructural proteins of hepatitis C virus (HCV), for diagnosing or treating patients having or suspected of having HCV
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

The invention relates to an isolated mammalian anti-dual integrin
antibody having at least one of the human heavy chain or light chain
cc complementary determining region (CDR, HC CDR1-CDR3, LC CDR1-3). Also
cincluded are the nucleic acids encoding the CDRs, a vector comprising the
cc included that binds to the ant-dual integrin, a medical device comprising
cn antibody that binds to the ant-dual integrin, a medical device comprising
the antibody suitable for administration by parenteral, subcutaneous,
intraabdominal, intravenous, intracarticular, intracarcinar,
intracelebellar, or other routes as given in specification. The antibody
c is useful for diagnosing or treating a dual integrin related condition in
a naimal for example, immune related disease such as rheumatoid
arthritis, gastric ulorer, ashtma, allergic thinitis, crohn's pathology,
c sickle cell anaemia, diabetes, cardiovascular disease such as
arteriosclerosis, atherosclerosis, restenosis, angina pectoris,
c viral, and fungal infections pneumonia, leprosy, malaria; malignant
c disease such as leukaemia, chronic myelesse such as multiple
collymphone, multiple myeloms, neurological disease such as multiple
collymphone, multiple myeloms, neurological disease such as multiple
collymphone, multiple myeloms, neurological disease such as multiple
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel isolated mammalian anti-dual integrin antibody, useful for diagnosing or treating dual integrin related condition such as rheumatoid arthritis, gastric ulcer, asthma, atherosclerosis, restenosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          sclerosis, Parkinson's disease, spinal ataxia, Alzheimer's disease,
Creutzfeldt-Jakob disease and many other diseases given in the
specification. The present sequence is an anti-dual integrin human light

Human COU-1 antibody VL CDR2 peptide #1

(first entry)

06-NOV-2003

AAE38098;

AAE38098 standard; peptide; 7 AA

```
has immunosuppressive, antiinflammatory, dermatological, antilucer, antipremanic, antiantering antipremanic, antiantering antipremanic, antiinflammatory, dermatological, antilucer, antipremanic, antiinfertility, antithyroid, thyromimetic, haemostatic and cytostatic activities, and can be used as a tumour necrosis factor. The integralises TYRST13b human antibody or an antibody that neutralises TYRST13b activity by binding an epitope of TYRST13b is useful in manufacturing a medicament for administering to a subject suffering from a disorder in which TYRST13b activity is detrimental, e.g. systemic lupuse expthematosus, rheumatoid arthritis, juvenile chronic arthritis, Lyme arthritis, Crohn's disease, ulcerative colitis, inflammatory bowel disease, asthma, allergic diseases, psoriasis, acute or chronic immune disease, asthma, allergic diseases, psoriasis, antectious diseases, parasitic diseases, female infertility, autoimmune thrombocytogaenia, autoimmune thyroid disease, Hashimoto's disease, Sjogren's syndrome, or cancer. The present sequence represents the complementarity determining region 2 (CDR2) of anti-hTMYSF13b light chain, which is given in the
                                            Anti-hTNFSF13b human antibody; antibody; human; TNFSF13b; antiulcer; immunosuppressive; antinflammatory; dermatological; antirheumatic; antiaflallergic; antipsoriatic; antipparasitic; antiathritic; antiaschmatic; antiallergic; antipsoriatic; antipparasitic; antithritic; antiathyroid; thyromimetic; haemostatic; cytostatic; tumour necrosis factor antagonist; thyromimetic; haemostatic; cytostatic; cystemic lupus erythematosus; juvenile chronic arthritis; Lyme arthritis; crohn's disease; ulcerative colitis; inflammatory bowel disease; asthma; allergic disease; pacriasis; immune disease; organ transplant rejection; graff-versus-host disease; manune disease; cancer; garafitic disease; female infertility; autoimmune thrombocytopaenia; autoimmune thyroid disease; Habilmoto's disease; Sjogren's syndrome; complementarity determining region; CDR.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       present invention describes an anti-hTNFSF13b human antibody (I). (I)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New anti-hTNFSF13b human antibody, useful in manufacturing a medicament for inhibiting TNFSF13b activity in a subject suffering from a disorder in which TNFSF13b activity is detrimental, e.g. asthma, cancer or rheumatoid arthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gelfanova VP, Hale JE, Kikly KK, Witcher DR, Rathnachalam R;
Anti-hTNFSF13b human antibody light chain CDR2 SEQ ID NO:6.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                100.0%; Score 34; DB 6; Length 7; 100.0%; Pred. Novel isolated cancer-associated epitope comprising two separate polypeptides, a cytokeratin 8 polypeptide and a cytokeratin 18 polypeptide, useful as component of vaccine for preventing or treating

Claim 15; Page 36; 155pp; English.

adenocarcinoma.

```
ö
The invention provides a cancer-associated epitope comprising two separate polypeptides, a cytokeratin 8 polypeptide and a cytokeratin 18 polypeptide. Vaccine composition of the invention is useful for treating or preventing colon adenocarcinoma, ovarian adenocarcinoma, renal adenocarcinoma, mammary adenocarcinoma, lung adenocarcinoma, pancreatic adenocarcinoma or non-seminomal testis carcinoma. The invention is also useful for preparing a medicament for treating or preventing cancer in a mammal. The present sequence is human COU-1 cancer-associated epitope antibody VL (light chain variable region) CDR (complementarity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human; antibody; CD30; tumour; autoimmune disease; rheumatoid arthritis; systemic lupus erythematosus; systemic sclerosis; Grave's disease; ALCL; atopic dermatitis; Hashimoto's thyroiditis; chronic renal failure; ALD; acute infectious mononucleosis; angioimmunoblastic lymphadenopathy; HIV; Hodgkin's disease; Castleman's disease; Kaposi's sarcoma; lymphoma; ATL; adult T cell lymphoma; human immunodeficiency virus; carcinoma; therapy;

                                                                                                                                                                                                                                                                                                                                  The invention relates to human monoclonal antibody that binds to human CD30. The antibody is useful for treating or preventing tumour or autoimmune disease.e.g. rheumatoid arthritis, systemic lupus extormanne disease.e.g. rheumatoid arthritis, systemic lupus crythematosus, systemic sclerosis, atopic dermatitis, Grave's disease, Hashimoto's thyroiditis, Wegner's granulomatosis, Omen's syndrome, Chronic renal failure, acute infectious mononcleosis, herpes or HIV (human immunodeficiency virue) virus-associated diseases. The antibody is also useful for treating Hodgkin's disease, anaplastic large cell. Iymphoma (ALCL), adult T cell lymphoma (ATL), angioimmunoblastic lymphoma carcinomas, undifferentiated carcinomas of the based lymphomas, embryonal carcinomas, undifferentiated carcinomas of thio-pharynx (e.g. Schmincke's tumour), Castleman's disease, Kaposi's Sarcoma and other T-cell or B-cell lymphomas. The present sequence is human CD30 antibody VL (light chain variable domain) CDR (complementarity determining region) peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö

New isolated human monoclonal antibody comprising a human heavy chain and a human light chain variable regions, both comprising FR1, CDR1, FR2, CDR2, FR3, CRD3 and FR4 sequences, useful for treating or preventing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a novel isolated human monoclonal antibody comprising a human heavy chain variable region and a human light chain variable region both comprising FFF (framework region) -1, CDR (complementarity determining region) -1, FRZ, CDRZ, FRZ, CRD3 and FR4 sequences. The antibody is directed against the human prostate specific membrane antigen (FSMA). The monoclonal antibody of the invention demonstrates cycostatic activity and may be useful for treating or preventing a disease characterised by the growth of tumour cells such as cancer, particularly prostate cancer, colon cancer or renal carcinoma, well as duing gene therapy procedures. The current sequence is that of the human light chain variable region CDRZ peptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

New isolated human monoclonal antibody comprising a human heavy chain and a human light chain variable regions, both comprising FR1, CDR1, FR2, CDR2, FR3, CRD3 and FR4 sequences, useful for treating or preventing
                 isolated human monoclonal antibody comprising a human heavy chain and
                                                                                                                                          comprising human heavy chain variable region and a human light chain variable region both comprising FR (framework region)-1, CDR (complementarity determining region)-1, FR2, CDR2, FR3, CRD3 and FR4 sequences. The antibody is directed against the human prostate specific membrane antigen (PSMA). The monoclonal antibody of the invention demonstrates cytostatic activity and may be useful for treating or preventing a disease characterised by the growth of tumour cells such as cancer, particularly prostate cancer, colon cancer or renal carcinoma, as well as duing gene therapy procedures. The current sequence is that of the human light chain variable region CDR2 peptide of the invention.
                             a human light chain variable regions, both comprising FR1, CDR1, FR2 CDR2, FR3, CRD3 and FR4 sequences, useful for treating or preventing
                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              monoclonal antibody; heavy chain variable region; light; framework; complementarity determining; CDR1; FR1; FR2; CDR2; FR3; CDR3; FR4; prostate specific membrane antigen; PSW4; cytostatic; tumour; colon cancer; renal carcinoma; gene therapy; human.
                                                                                                                                invention relates to a novel isolated human monoclonal antibody
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Black A;

The present sequence is that of complementarity determining region 2 (CDR2) of the human anti-interleukin-1 receptor type 1 (IL-IR1) monoclonal antibody (MAD) 26F5 and 272 light chain variable region monoclonal antibodies of the invention may comprise this CDR. These antibodies inhibit IL-1 signalling by competing with IL-1beta and IL-1Brahba binding to IL-1R. Monoclonal antibodies, as well as single chain antibodies single chain FV antibodies. Fab antibodies is mellodies single chain FV antibodies, as well as single antibodies and (Fab')2 antibodies, are used in methods of treating IL-1 mediated diseases or for detecting the amount of IL-1R1 in a sample. Committed diseases include acute pancreatitis, amyotrophic lateral sclerosis, Alzheimer's disease, cachexia, anorexia, asthma, closeridium associated illnesses, coronary conditions, cancer including leukaemia and tumour metastasis, diabetes, endometriosis, fever,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human, monoclonal antibody, antibody, interleukin-1; receptor; antiasthmatic; antiinflammatory; dermatological; antiallargic; procozoacide; antirheumatic; antiarthritic; osteopathic; vasotropic; analysesic; antidiabetic; nephrotropic; antianemic; nootropic; anticonvulsant; dermatological; antigout; antidiabetic; nethrotropic;
sequences. The antibody is directed against the human prostate specific membrane antigen (PSMA). The monoclonal antibody of the invention demonstrates cytostatic activity and may be useful for treating or preventing a disease characterised by the growth of tumour cells such as cancer, particularly prostate cancer, colon cancer or renal carcinoma, as well as duing gene therapy procedures. The current sequence is that of the human light chain variable region CDR2 peptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              in a sample.                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This invention relates to a novel isolated human monoclonal antibody which binds to human CD20 (human B-lymphocyte-restricted differentiation antiden or Bp35). The invention may be useful for the production of compositions with a cytostatic, antipsoriatic, antiinflammatory, neuroprotective, ophthalmological, nephrotropic, antiasthmatic, antiarteriosclerotic, antianaemic, antirheumatic, antithyroid or anti-HIV activity. In addition the invention may be useful
                                                                                                                                                                                                                                                                                                                                                                                 human monoclonal antibody, CD20, human B-lymphocyte-restricted differentiation antigen; Bp35; cytostatic; antiantiatic, antiantancar; neuroprotective; ophthalmological; nephrotropic; antiathmatic; antiateriosclerotic; antianaemic; antirheumatic; antithyroid; anti-HIV; gene therapy; cancer; psoriasis; inflammatory bowel disease; meningitis; uveitis; glomerulonephritis; asthma; atherosclerosis; multiple sclerosis; haemolytic anaemia; myasthenia gravis; rheumatoid arthritis; draves; disease; HIV; CDR; complimentarity determining region; human.
          osteoarthritis, rheumatoid arthritis, inflammatory eye disease, ischaemia, Kawasaki's disease, learning impairment, lung diseases, multiple sclerosis, myopathy, osteoporosis, pain, Parkinson's disease, periodontal disease, pre-term labour, psoriaats, repertusion injury, septic shock, side effects of radiation therapy, temporal mandibular joint disease, aleep disturbance, uveitis, or an inflammatory condition resulting from strain, sprain, cartilage damage, trauma, orthopaedic surgery, infection or other disease processes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New human monoclonal antibodies against CD20, useful for diagnosing, preventing or treating diseases involving cells expressing CD20, e.g. cancer, psoriasis, HIV, glomerulonephritis, asthma, atherosclerosis o

The invention may be useful for the production of compositions with a cytostatic, antiposortatic, antiinflammatory, neuroprotective, ophthalmological, nephrotropic, antiarthritic, antiarteriosclerotic, antianamenic, antiarteriosclerotic, antianamenic, antiarthritic, antiarthritic, antiarthritic, antiarthritic, antistryrold or anti-HIV activity. In addition the invention may be useful
for gene therapy. The invention is useful for diagnosing, preventing or treating diseases or disorders involving cells expressing CD20, such as cancer, psoriasis, inflammatory bowel disease, meningitis, uveitis, glomerulonephritis, asthma, atherosclerosis, multiple sclerosis, haemolytic anaemia, myasthenia gravis, rheumatoid arthritis, Graves' disease or HIV. The anti-idiotypic antibody is used for detecting the level of human monoclonal antibody against CD20 in a sample. The present sequence is that of a human complimentarity determining peptide (CDR) peptide which was used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            human monoclonal antibody; CD20; human B-lymphocyte-restricted differentiation antigen; Bp35; cytostatic; antipscriatic; antinflammatory; neuroprotective; ophthalmological; nephrotropic; antinatehmatic; antiarteriosclerotic; antiarenaemic; antirheumatic; antiarteriosclerotic; anti-HIV; gene therapy; cancer; psoriasis; inflammatory bowel disease; meningitis; uveitis; glomerulonephritis; asthma; atheroscleroscis; multiple sclerosis; haemolytic anaemia; myasthenia gravis; rheumatoid arthritis; Graves' disease; HIV; CDR; complimentarity determining region; human.

;
for gene therapy. The invention is useful for diagnosing, preventing or treating diseases or disorders involving cells expressing CD20, such as cancer, psoriasis, inflammatory bowel disease, meningitis, uveitis, glomerulonephritis, asthma, atherosclerosis, multiple sclerosis, haemolytic anaemia, myasthenia gravis, rheumatoid arthritis, Graves' disease or HIV. The anti-idiotypic antibody is used for detecting the level of human monoclonal antibody against CD20 in a sample. The present sequence is that of a human complamentarity determining peptide (CDR) peptide which was used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 human monoclonal antibody, CD20, human B-lymphocyte-restricted differentiation antigen; Bp35, cytostatic; human B-lymphocyte-restricted differentiation antigen; Bp35, cytostatic; antianiatic; neuvoprotective; onthanaemaci; nephrotropic; antiartentic; antiartentiosclerotic; antianaemaci; antithyroid; anti-HIV; gene therapy; antirheumatic; antithyroid; anti-HIV; gene therapy; cancer; psoriasis; inflammatory bowel disease, meningitis; uveitis; glomerulonephritis; athma; atherosclerosis; multiple sclerosis; haemolytic anaemia; mysathenia gravis; rheumatoid arthritis; draves' disease; HIV; CDR; complimentarity determining region; human.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New human monoclonal antibodies against CD20, useful for diagnosing, preventing or treating diseases involving cells expressing CD20, e.g. cancer, psoriasis, HIV, glomerulonephritis, asthma, atherosclerosis o

for gene therapy. The invention is useful for diagnosing, preventing or treating diseases or disorders involving cells expressing CD20, such as cancer, psoriasis, inflammatory bowel disease, meningitis, uveitis, glomerulonephritis, asthma, atherosclerosis, multiple sclerosis, haemolytic anaemia, myssthenia gravis, rheumatoid arthritis, Graves' disease or HIV. The anti-idiotypic antibody is used for detecting the level of human monoclonal antibody against CD20 in a sample. The present sequence is that of a human complimentarity determining peptide (CDR) peptide which was used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This invention relates to novel antibody and antigen-binding fragments of antibodies that bind alphaE-beta7 integrin chains (CDLO3). Specifically, it refers to the binding of activation induced epitopes present on activated alphaE integrins, where these integrins are activated by exposure to divalent cations (e.g. Mn2+), to phorbol esters or suitable growth factors and/ or mitogens. The present invention describes the alphaE-beta7 integrin as a homing receptor that mediates lymphocyte migration to mucosal epithelium. As such, compositions of this invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel antibody which binds activated alpha-E integrin, specifically to activation-induced epitope on integrin alpha-E chain (CD103), useful for treating inflammatory bowel diseases e.g., Crohn's disease,
                                                                                                                                                                                                                                                                                          Gaps

of a human antigen-presenting molecule and an antigen derived from a pathogen), a mucleic acid construct comprising the isolated publymucleotide above (and a promoter sequence for directing transcription of the isolated polymucleotide in a host cell), a host cell comprising the mucleic acid construct above, a virue comprising a cost protein fused to the antibody fragment, detecting an antigen-presenting portion of a complex composed of a human antigen-presenting molecule and an antigen derived from a pathogen, a method of killing or damaging a target cell comprised of a human antigen-presenting molecule and an antigen persenting portion of a complex composed of a human antigen-presenting molecule and antigen derived from a pathogen) and amethod of Killing or deecting in a biological sample an antigen-presenting portion of a complex as described above. The target cell is a Tymphocyte or an antigen-presenting portion of a complex as described above. The target cell is a Tymphocyte or an antigen-presenting cell, which is a B cell or a dendritic cell; The composition-ci-matter further comprises a cetectable molety attached to the antibody or antibody fragment. The composition-ci-matter further comprises of biotin molecule, a streptavidin molecule, a fluorophore, an enzyme or a polyhistidine tag. The biotin protein ligase is BirA, the fluorophore is phycosythrin, and the enzyme is presenting molecule, as treptavidin molecule, as treptavidin molecule, as treptavidin molecule, as molecule, more preferably HuA-A-Z molecule. The pathogen is viral, molecule, more preferably HuA-A-Z molecule. The pathogen is viral, molecule, more preferably HuA-A-Z molecule. The pathogen is viral, molecule, and is a polypeptide selected from a segment of a pathogen is restricted by the antigen compretion and is a polypeptide selected from a segment of composition comprising as an active ingredient the composition comprising as an active ingredient in a method for treating as an active ingredient in an individual such as viruses (HVI), pro
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö

Sequence 7 AA;

The invention relates to a composition-of-matter comprising (a multimeric form of) an antipody or antipody fragment including an antigen-binding region capable of specifically binding an antigen-presenting portion of a complex composed of a human antigon-binding an antigen-binding are region capable of specifically binding an antigen-binding region capable of comprising a mucleic and sequence encoding an antigon capable of antibody fragment included are an isolated polymucleotide comprising an entigon-binding region capable of antibody fragment included an antigon-binding region capable of antibody fragment included an antigon-binding region capable of antibody fragment included an antigon-binding region capable of the mucleic acid construct comprising oct of dereing transcription of the isolated body a virus comprising the nucleic can construct above, a host call, a host cell complex concerned above, an embod of diagnoshing presenting prated of a human antigon-presenting molecule and an antigon derived from a pathogen, a method of killing or damaging a target cell complex composed of a human antigon-presenting molecule and an antigon derived composed of a human antigon-presenting molecule and an antigon derived from a pathogen in antigon-presenting portion of a complex (composed of a human antigon-presenting molecule and an antigon derived from a pathogen in an individual, a method of diagnoshing an individual, a method of diagnoshing an individual, a method of diagnoshing an individual, and the ensymmeter of a biotin protein ligase; a cell is a Tlymphocye or an artigon-presenting cell, which is a Bell an antigon-presenting portion of a biotin protein ligase, a decerable molety attached to the antibody or antibody fragment. The antigon-presenting molecule, a dreptavidin molecule, a green and an antigon-presenting molecule and the biody in an antigon-presenting molecule and the biody and antigon-presenting molecule and the biody in a preferably human and proproced or a biotin procession of an approprise composa Fab antibodies which recognise an HLA-A2/Tax 11-19 complex was generated and tested for specific binding to HLA-A2/Tax 11-19, individual clones were then sequenced and their CDR (complementarity determing region) sequences compared. The present sequence is a CDR from the light chain of composition comprising a multimeric form of an antibody or fragment which specifically binds an antigen-presenting portion of a complex, useful for treating pathogen-associated diseases e.g., HIV. (TECR) TECHNION RES & DEV FOUND LID. Claim S; SEQ ID NO 36; 68pp; English. 26-MAR-2003; 2003US-00396578 26-MAR-2003; 2003US-00396578 isolated Fab clone. WPI; 2004-735863/72. The invention describes an isolated binding member comprising at least concerns binding domain capable of specifically binding Streptococcus one binding domain capable of specifically binding Streptococcus preumoniate surface adhesin A (PsaA) protein, the binding domain having a dissociation constant Kd for PsaA which is less than 1 x10 -6 M. Also conservation isolated nucleic acid molecule encoding at least a part of the binding member described above; a vector comprising the nucleic acid molecule of (1); a cell line engineered to express the binding member described above. The preumococcus in an individual; a kit comprising at least one binding composition comprising at least one binding an east one binding member described above, the antibody being labeled; and a pharmaceutical composition comprising at least one binding member is useful for producing a pharmaceutical composition are useful for treating or preventing an individual suffering composition are useful for treating or preventing an individual suffering composition are useful for treating or preventing an individual suffering composition are useful for treating or preventing an individual suffering composition are useful for treating or preventing an individual suffering composition are useful for treating or preventing an individual suffering composition are useful for treating or preventing an individual suffering composition are useful for treating or preventing an individual suffering composition are useful for cented with S. pneumoniae, e.g. pneumoniae, meningitis and/or sepsis. This sequence encodes anti-pneumococcal surface composition and some service of the composition are useful for cented search search search search search search search search search search search search search search search search search search search search search search search search search search search search search search search search search search search search search search search search search search search search search search search search search search searc

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention describes an isolated binding member comprising at least one binding domain capable of specifically binding Streptococcus pneumoniae surface address A (FBaA) protein, the binding domain having a dissociation constant Kd for FBAA which is less than 1 x10 -6 M. Also described are: an isolated nucleic acid molecule encoding at least a part of the binding member described above; a vector comprising the nucleic acid molecule of (1); a cell line engineered to express the binding member described above; (1); a cell line engineered to express the binding member described above; control of a control of a cell line and a cell of the antibody being labeled; and a pharmaceutical composition comprising at least one binding member described above. The binding member is useful for producing a pharmaceutical composition are useful for producing a pharmaceutical composition are useful for treating or preventing an individual suffering composition are useful for treating or preventing an individual suffering from disorders or diseases associated with S. pneumoniae, e.g. pneumonia, contingits and/or sepsis. This sequence encodes anti-pneumococcal surface composition are useful for treating or preventing an individual suffering composition are useful for treating or preventing an individual suffering composition are useful for treating or preventing an individual suffering composition and the sepsis. This sequence encodes anti-pneumococcal surface complementarity determining region 2 (CDR2).

The antibody is useful in treatment or prevention of thrombosis, embolism or arteriosclerosis. The antibody is useful in diagnosis of the disease by detecting or determining glycoprotein VI. The antibody is useful in the prevention and/or treatment of vascular endothelium failure, vascular endothelium hypertrophy, blood vessel restenosis, disseminated intravascular coagulation (DIC), diabetic retinopathy, graft-versus-host disease, etc. The antibody exhibits high specificity with respect to glycoprotein VI, and can be obtained easily. The present sequence represents the amino acid sequence of a human platelet membrane glycoprotein VI associated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  specifically with human platelet membrane glycoprotein VI and not inducing human platelet aggregation by itself, useful for treatment or prevention of thrombosis.
                                                                                                                                                                                                                                                                                                                                               Human platelet membrane glycoprotein VI associated CDR SEQ ID NO 134.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

```
The invention describes an isolated human antibody that interacts with or binds specifically to human nerve growth factor (NGF) and neutralize the function of NGF. Also described are: methods of treating a condition caused by increased expression of NGF or increased sensitivity to NGF in a pecific binding agent comprising any of the 59 amino acid sequences comprising, for e.g. 123, 107 or 14 amino acids, as mentioned in the specification, and where the binding agent can bind to NGF; a plarmaceutical composition comprising a pharmaceutical carrier and a therapeutic amount of the antibody or binding agent cited above; or a medicament comprising a pharmaceutical carrier and a medicament comprising a pharmaceutical carrier and a medicament comprising a pharmaceutical carrier and a medicament comprising a pharmaceutical amount of a monoclonal antibody or increased sensitivity to NGF, the medicament comprising a pharmaceutical amount of a monoclonal antibody or increased sensitivity to NGF, the medicament comprising a pharmaceutical amount of a monoclonal antibody or the fragment, where the monoclonal antibody or binding agent; an entibody is at least one of the monoclonal antibody or binding agent; an espate cell into that produces the above antibody or binding agent; an espate comprising the ancodes the above antibody or binding agent; an expression vector comprising the above polynucleotide; and a host cell comprising the nucleic acid or expression vector. The composition of medicament for treating a painful disorder (e.g. acute pain, dental pain, or pain from trauma or cancer), or a condition associated with increased expression of MGF or tibody heavy chain complementarity defermining approach comprised to the minan NGF antibody has contexed to the companies of a human NGF antibody has confident minimal medicaments of a binger and the produce of the monocloner of a human NGF antibody has a contexed to the monocloner of a binger where the monocloner and the produce the above antibody and the parameter of a paramet
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö

The invention describes an isolated human antibody that interacts with or binds specifically to human nerve growth factor (NGF) and neutralize the function of NGF. Also described are: methods of treating a condition caused by increased expression of NGF or increased sensitivity to NGF in a patient; methods for detecting NGF in a biological sample; an NGF specific binding agent comprising any of the 59 amino acid sequences comprising, one e.g. 123, 107 or 14 amino acids, as mentioned in the specification, and where the binding agent can bind to NGF; a pharmaceutical composition comprising a pharmaceutical carrier and a medicament for treating a painful disorder or condition associated with increased expression of NGF or increased sensitivity to NGF, the medicament comprising a pharmaceutical amount of a monoclonal antibody or increased sensitivity to NGF, the condition associated with increased expression of NGF or increased sensitivity to NGF, the medicament comprising a pharmaceutical amount of a monoclonal antibody or the fragment, where the monoclonal antibody or the fragment, where the monoclonal antibody or salts of the monoclonal antibody or the fragment, where the monoclonal carrier, diluent or excipient; a nucleic acid molecule or polymucleotide that encodes the above antibody or binding agent; and spolymucleotide that encodes the above antibody or binding agent; and comprising the mucleic acid or expression vector. The composition comprising the antibody) and methods are useful for manufacturing a painful disorder (e.g. acute pain, dental pain, or expression vector. The composition comprising the antibody is a condition associated with increased expression of NGF or increased sensitivity to NGF. This is the amino acid expression of NGF or increased sensitivity to NGF. This is the amino acid expression of NGF or increased sensitivity to NGF. This is the amino acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New human anti-nerve growth factor (NGF) neutralizing antibodies useful for manufacturing a medicament for treating painful disorders (e.g. acute pain) or conditions associated with increased expression or sensitivity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

                                                                                                                                                                                                                                                                                       ð
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to an isolated nucleic acid comprising a sequence encoding a SARS coronavirus (SARS-CoV) spike glycoprotein (S protein), or its fragment, where the sequence has been optimized for expression in a chuman host. Also described: (1) a nucleic acid expression vector comprising the above nucleic acid; (2) an isolated cell comprising the expression vector of (1); (3) a polypeptide encoded by the above nucleic acid; (4) an isolated polypeptide comprising an extracellular portion of the SARS-CoV S polypeptide located between amino acids 15-1190 of the SARS-CoV S polypeptide located between amino acids 15-1190 of the SARS-CoV S polypeptide located between amino acids 15-1190 of the stars antigen binding fragment, that specifically binds to the polypeptide of (3); (6) an isolated antigon binding fragment of an anti-S protein antibody; (7) a composition comprising a polypeptide of (4) or an antibody; (7) a composition comprising a polypeptide of (4) or an antibody; or its antigen binding fragment, and a pharmaceutical carrier; (8) making an Suptotein of SARS-CoV; (10) evaluating a biological sample for the presence of SARS-CoV; (11) evaluating a biological sample for the presence of SARS-CoV; (11) evaluating an antibody, or its antigen binding fragment, that specifically binds to an S protein of SARS-COV; (11) evaluating an antibody, or its antigen binding fragment, for its antigen binding fragment, for contained to a therapeutic agent; (14) an isolated nucleic acid molecule encoding the antibody, its antigen-binding portion, variable comprising the nucleic acid molecule of (14); (15) an expression vector of (15); (17) a transgenic mannament communoglobulin heavy and light chain transgenes, where the mouse expresses the antibody of (5); (18) a hybridoma prepared from the mouse comparising produces the antibody of (5); (18) a hybridoma prepared from the mouse comparison produces the antibody of (5);
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New isolated nucleic acid encoding a SARS-CoV spike glycoprotein polypeptide, and optimized for expression in a human host, useful for diagnosing, preventing and/or treating SARS-CoV infection.
                                                                                                                            glycoprotein; respiratory-gen.; virucide; sars coronavirus infection; antibody; light chain variable region.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Luzuriaga K;

The invention may be useful for the development of compounds with a cyclostatic, antiinflammatory, osteopathic or antiarthritic activity whilst the disclosed sequences may prove useful for gene therapy. The protein is useful in proparing a composition for treating or preventing neoplastic disorders, for example breast,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  prostate, or lung cancer or inflammatory disorders, for example, rheumatoid arthritis, lupus, restenosis, graft versus host response or multiple aclerosis or a disorder characterized by excessive or undesired MMP-26 activity, for example periodontitis, rheumatoid arthritis or osteoarthritis. The present sequence is that of a CDR peptide which was used during the development of the novel MMP26-binding antibodies of the
anti-S protein antibody. The methods and compositions of the present invantion are useful for the diagnosis, prevention and/or treatment of SARS-COV infection. The present sequence represents the CDR2 amino acid sequence from the anti-SARS 201.2 antibody light chain variable region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New protein comprising heavy and light chain immunoglobulin variable domain sequences, useful in preparing a composition for treating or preventing neoplastic or inflammatory disorders.
                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           antiarthritic; gene therapy; cancer; breast tumor; prostate tumor; lung tumor; inflammation; rheumatoid arthritis; restenosis; graft versus host disease; multiple sclerosis; gingivitis;

                                                                                                                                            g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This invention relates to novel proteins, comprising a heavy chain immunoglobulin variable domain sequence and a light chain immunoglobulin variable domain sequence and a light chain immunoglobulin variable domain sequence, which bind to matrix metalloproteinase (MMP)-26 and comprise at least one human complementarity determining region or framework region. The invention may be useful for the development of compounds with a cytostatic, antiinflammatory, osteopathic or mitiathritic activity whilst the disclosed sequences may prove useful for gene therapy. The protein is useful in preparing a composition for treating or preventing neoplastic disorders, for example breast, prostate, or lung cancer or inflammatory disorders, for example breast, corectate, or lung cancer or inflammatory disorders, for example or multiple sclerosis or a disorder characterized by excessive or undesired multiple aclerosis or a disorder characterized by excessive or undesired multiple aclerosis or a disorder characterized by excessive or undesired characterities. The present sequence is that of a CDR peptide which was used during the development of the novel MMP26-binding antibodies of the

```
The present invention relates to a human antibody or antibody fragment, which binds to the C-terminal domain of Apolipoprotein E (ApoE-CTD; AEA44803) and also to human plaques. The antibody or its fragment is useful for manufacturing a medicament for treating or preventing an amyloid disorder such as Alzheimers disease, primary systemic amyloidosis, secondary systemic amyloidosis, senile systemic amyloidosis, familial amyloid polyneuropathy (Familial amyloid polyneuropathy) familial amyloidosis, hereditary cerebral amyloidosis, familial amyloidosis, hereditary cerebral amyloidosis, pamilial amyloidosis, hereditary renal amyloidosis, printitary carcinoma of the myloidosis (Finnish type), Familial subepithelial corneal amyloidosis, injection localized amyloidosis, Medullary carcinoma of the thyroid, Atrial amyloidosis, Familial Danish dementia (FDD), Downs syndrome, Spongiform encephalopathies, Sporadic Creutzfeldt Jakob syndrome, Spongiform encephalopathies, Sporadic Creutzfeldt Jakob sissease, dersmann-Strausslar-Scheinker Disease (GSS), Kuru, Parkinsons disease, Huntingtons disease, Familial amyotrophic lateral sclerosis, and chinal constructive pulmonary disease. The present sequence was used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ô
New human antibody or antibody fragment which binds to a sequence of the C-terminal domain of Apolipoprotein B (ApoB-CTD), useful for manufacturing a medicament for treating or preventing an amyloid disorder e.g. Alzheimers disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               100.0%; Score 34; DB 9; Length 7; 100.0%; Pred. RESULT 28 AEB01035

```
The invention relates to an isolated human monoclonal antibody or an antigen-binding portion, which specifically binds to human IP-10 and cantigen-binding portion, which specifically binds to human IP-10 and exhibits at least one property selected from: inhibits binding of IP-10 to CXCR3; inhibits IP-10 induced call migration; cross-reacts with rise inhibits IP-10 induced call migration; cross-reacts with flamman monoclonal antibody is creat with mouse IP-10, does not cross-react with human IIFG. The isolated human monoclonal antibody is useful for treating an inflammatory or autoimmune disease including multiple sclerosis, rhematorid arthritis, inflammatory bowel disease (e.g., ulcerative colitis, Crohn's disease), systemic lupus cryhematosus, Type I diabetes, inflammatory skin disorders (e.g., disease, Hashimoto's thyroiditis), sjongren's syndrome, pulmonary disease, disease, Hashimoto's thyroiditis), sjongren's syndrome, pulmonary carcoidosis, lymphocytic alveolitis), transplant rejection, spinal cord injury, brain injury (e.g., stroke), neurodegenerative considerative calesases (e.g., Alzheimer's disease, Parkinson's disease), gingivitis, gene therapy-induced inflammation, diseases of angiogenesis, inflammatory calesared (e.g., Alzheimer's disease, Parkinson's disease), gingivitis, glomerulonephritis, rapidly progressive glomerulonephritis, rapidly progressive glomerulonephritis, rapidly progressive glomerulonephritis, candiated by HIV, HCV, HSV-1 or SARS virus. The present confined confined confined confined confined confined confined confined confined confined confined confined confined confined confined confined confined confined confined confined confined confined confined confined confined confined confined confined confined confined confined confined confined confined confined confined confined confined confined confined confined confined confined confined confined confined confined confined confined confined confined confined confined confined confined confined confined confined confined confined con
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Isolated human monoclonal antibody or an antigen-binding portion, which specifically binds to human interferon gamma inducible protein 10 (IP-10), useful for treating viral or bacterial infection, or inflammatory or autoimmune diseases.
                                                                                                                                                                                                                               antibody; IP-10; inflammation; immune disorder; dermatological disease;

The invention relates to an isolated human monoclonal antibody or an antigen-binding portion, which specifically binds to human IP-10 and exhibits at least one property selected from: inhibits binding of IP-10 to CXCR3; inhibits IP-10 induced calcium flux; inhibits IP-10 induced call migration; cross-reacts with rhesus monkey IP-10; does not cross-creact with mouse IP-10; does not cross-react with human IRG. The isolated human monoclonal antibody is useful for treating an inflammatory or autoimmune disease including cross-react with human IRG. The isolated human monoclonal antibody is useful for treating an inflammatory or autoimmune disease including cross-react with human IRG. The isolated human monoclonal antibody is useful for treating an inflammatory or autoimmune disease including cross-react with human IRG. Crohn's disease, systemic lupus erythematosus, Type I diabetes, inflammatory skin disease (e.g., draves' disease, Hashimoto's thyroiditis), Sjogren's syndrome, pulmonary crocidosis, lymphocytic alveolitis, transplant rejection, spinal cord injury, brain injury (e.g., stroke), neurodegenerative diseases (e.g., Alzteimer's diseases (e.g., althemation, diseases (e.g., althemation, diseases (e.g., althemation, diseases), gingivitis, sidney disease (e.g., Alzteimer's diseases, Parkinson's diseases, inflammatory kidney disease (e.g., IgA nephropathy, membranoproliferative cglomerulonephritis, rapidly progressive glomerulonephritis), or atherosclerosis. It is also useful for treating a viral or bacterial
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Isolated human monoclonal antibody or an antigen-binding portion, which specifically binds to human interferon gamma inducible protein 10 (IP-10), useful for treating viral or bacterial infection, or inflammatory or autoimmune diseases.
                                                                                                                                                                                                                                                                 antibody; IP-10; inflammation; immune disorder; dermatological disease;
                                                                                                                                                                                                                                                                                                                respiratory disease; neurological disease; degeneration; infection; Neuroprotective; Antiarthritic; Antircheumatic; Antinflammatory; Gastrointestinal-Gen.; Antiulcer; Dermatological; Immunosuppressive; Antidiabetic; Antiporiatic; Antithyroid; Antiasthmatic; Respiratory-Gen.; Cerebroprotective; Vasotropic; Nootropic; Antiparkinsonian; Antiangiogenic; Antiarteriosclerotic; Virucide; Antibackerial.
                                                                                                                                                                                  Human IP10 antibody light chain variable region, CDR2, SEQ ID NO 63.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ΰ

spinal cord injury, brain injury (e.g., stroke), neurodegenerative diseases (e.g., Alzheimer's disease, Parkinson's disease), gingivitis, gene therapy-induced inflammation, diseases of angiogenesis, inflammatory kidney disease (e.g., Igh nephropathy, membranoproliferative glomerulonephritis, rapidly progressive glomerulonephritis), or atherosclerosis. It is also useful for treating a viral or bacterial infection involving unwanted IP-10 activity in a subject, where the viral infection is mediated by HIV, HSV-1 or SARS virus. The present sequence represents the amino acid sequence of a human IP10 monoclonal antibody light chain variable region, CDR2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to a composition-of-matter which comprises an antibody or antibody fragment or a multimeric form of an antibody or antibody or antibody an antigen-binding region capable of specifically binding an antigen-presenting portion of a complex composed of a human antigen-presenting molecule (APM) and an antigen presenting molecule (APM) and an antigen derived from a pathogen. The invention is useful for the specific detection of the antigen-presenting portion of the complex and for diagnosing/treating various types of diseases associated with a pathogen infection by killing/damaging pathogen infected cells. The present sequence is a complementarity determining regions (CDR) of Fab light chain antibody specifically binding human leukocyte antigen (HLA-A2)/Tax11-19 complex.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New composition-of-matter capable of specifically binding an antigen-
presenting molecule and a pathogen-derived antigen complexes, useful for
treating diseases associated with a pathogen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human CDR2 of T3D3 Fab specifically binding HLA-A2/Tax11-19, SEQ: 36
